

QUICK GUIDE | EDITION 10.X

TABLE SOCCER TOURNAMENT CENTER

From the first entry to the awards: a practical route through preparing, running and presenting a tournament.

Before the first round

Set up the tournament once. Check entrants, format and timing before assigning tables.

Setup: entrants, format, tournament identity and options.

01 Create the event

In **Setup**, enter the event name, date and participants. Add club crests or flags and check for duplicate names before generating the schedule.

02 Choose a format

Open the format adviser or select a format directly. Review groups, qualifiers and rules before confirming: they determine the rounds and final stage. In Swiss, the Buchholz decides right after points. **Real Tournament** offers 41 real competitions.

03 Prepare the tables

Set the number of tables and the length of each half. If you use referees and mobile devices, assign roles and prepare table QR codes ahead of time.

04 Run a rehearsal

Try a round with a few sample names. Check match calls, printing and the second screen; then return to the real event.

CHECK BEFORE THE DRAW

Before generating the groups: read the entry list aloud, confirm the chosen format and write down how many tables are actually available.

Draw and groups

After Setup, the app creates the pairings. Review them before starting LIVE.

Draw ceremony: the audience display and group bracket remain separate.

01 Confirm seed pots

If the event uses seeding, prepare the pots in Setup. The FISCT, FISTF and WASPA ranking panel can help arrange entrants.

02 Show the draw

Open the draw ceremony to accompany the extraction on the audience screen. Check the groups before moving to LIVE.

03 Adjust by hand

In the group grids you can drag a participant directly to another slot. Recheck the balance of the pots after each adjustment.

04 Share the groups

Open **Groups** to review fixtures and initial tables. Print or export a copy for the organising desk when needed.

IN PRACTICE

If you move a player by dragging, review both the pairings and seed pots immediately. Show the bracket only after the final confirmation.

The LIVE round

The control strip highlights the next action. Follow the sequence and record each score.

LIVE: each table has its own match, clock, score and controls.

01 Assign tables

Press **Assign the fields**. Confirm that each match appears on the announced table with the correct referee. The next action button flashes.

02 Start the round

Press **START ROUND** to start all assigned tables together. Adjust the countdown and minutes per half before play begins.

03 Follow play

Update scores on the boards or from connected devices. Voice dictation asks for confirmation before applying a result. Use **Pause all** if play stops.

04 Close the stage

When appropriate, press **Next Phase**. Once the matches have finished, press **End all** and check the return to Groups or the final stage.

ROUND SEQUENCE

1 Assign the fields → 2 START ROUND → 3 Scores and clocks → 4 Next Phase / End all.

Control and Presentation

A second display shows live information to the audience while the operator keeps the controls private.

Presentation: results, standings and audience content.

01 Connect the display

In your operating system, set the projector as an extended display. Press **Second screen**: the board opens in a separate window, to move onto the projector.

02 Choose the pace

In **Control Desk**, manage the ticker, voice announcements, volume, photos and replays. **AUTO LIVE** can cycle information automatically.

03 Show the full view

Use the combined view for the latest results and updated group standings on one screen, without changing sections.

04 Check from the seats

Before play, test legibility from the audience position, along with sound, ticker and on-air content. Keep the management window on the operator monitor.

VENUE TEST

Put the Second screen on the projector and stand at least three metres away. Names, scores and the ticker should be readable; controls stay on the operator display.

Replay, archive, delivery

Final checks protect the results and clips and make the event easy to revisit.

Replay Room: incoming clips, selection and on-air control.

01 Check the replays

Open **Replay Room**. Check the clip, match and score caption before putting it on air. If automatic replay is enabled, test the sequence on the projector.

02 Validate standings

Compare entered scores with the final standings. For ties, check the rules of the selected format before presenting the awards.

03 Save and share

Export or print results, standings and **personal schedules**; for FISTF events create the **Results for the FISTF** file. Keep a copy in the **Archive**.

04 Final checklist

Before: names, tables, timing, QR, display, sound. **During:** assignments, scores, pauses, replays. **After:** standings, exports, archive.

HAND OVER THE EVENT

Before shutting down, save a copy, export the results, check the final replays and reopen the archived file to confirm that it can be read.
